

# SCAN2MOBILE

## The smart solution for your book2net scanners

With scan2mobile, scans from our book2net scanners are transferred directly to smartphones, tablets or notebooks to offer you maximum convenience and efficiency. This solution is designed especially for libraries and public archives, where it has already met with great interest.

### Easy to use without an app:

Thanks to our browser-based solution, you can access scan2mobile by operating system (iOS or Android) without having to install an app.

### Quick integration via QR code:

Simply scan the QR code on the book2net-scanner or the connected monitor with your mobile device. You can then digitise the desired documents and transfer them directly.

### Flexible storage and access:

Choose between storing the digitised documents on your mobile device or as usual on a USB stick.

### Independence from the internet:

With our own hotspot, we ensure a reliable connection, independent of your network. The scanner therefore does not need to be connected to your internet.

### Maximum data security thanks to 2-way authentication:

The scan of the access data by the user and the query of the unique device MAC address ensure that only one mobile device can be connected to the scanner. This keeps the data protected and safe from unauthorised access.

# Installation by our technicians is quick and uncomplicated within 3 steps

# 1

Installation of the latest software version with many improvements and optimisation of the user interface and functionality.

# 2

Installation of special antennas in the housing of the scanner, which create their own secure and temporary WLAN. You then connect your device to this via QR code or displayed log-in data. After transmission, the information on the scanner is deleted in accordance with data protection guidelines and the scanner is ready for the next user.

# 3

Training of staff on the new function by our technician.

book2net is a MICROBOX brand
